IEEE Cluster

Call for Papers

https://clustercomp.org/2019/technical/

Clusters remain the primary system architecture for building many of today's rapidly evolving computing infrastructures and are used to solve some of the most world's most complex problems. The challenges to make them scalable, efficient, productive, and increasingly effective requires a community effort in the areas of cluster system design, advancing the capabilities of the software stack, system management and monitoring, and the design of algorithms, methods, and applications to leverage the overall infrastructure.

Following the successes of previous IEEE Cluster conferences, we again solicit high-quality original work for that advances the state-of-the-art in clusters and closely related fields. All papers will be rigorously peer-reviewed for their originality, technical depth and correctness, potential impact, relevance to the conference, and quality of presentation. Research papers must clearly demonstrate novel research contributions while papers reporting experiences must clearly describe the lessons learned and the resulting impact, along with the utility of the approach in comparison to previous work.

Authors must indicate the primary topic area of their submissions from the four topic areas provided below.

Area 1: Application, Algorithms, and Libraries

- HPC and Big Data application studies on large-scale clusters
- Applications at the boundary of HPC and Big Data
- New applications for converged HPC/Big Data clusters
- Application-level performance & energy modeling and measurement
- Novel algorithms on clusters
- Hybrid programming techniques (e.g., MPI+X)
- Cluster benchmarks
- Application-level libraries on clusters
- Effective use of clusters in novel applications
- Performance evaluation tools

Area 2: Architecture, Network/Communications, and Management

- Node and system architecture for HPC and Big Data clusters
- Architecture for converged HPC/Big Data clusters
- Energy-efficient cluster architectures
- Administration, monitoring & maintenance tools
- Accelerators, reconfigurable and domain-specific hardware
- Heterogeneous clusters
- Interconnect/memory architectures
- Single system/distributed image clusters
- Packaging, power and cooling

Area 3: Programming and System Software

- Cluster system software/operating systems
- Programming models for converged HPC/Big Data/ML systems
- System software supporting the convergence of HPC, Big Data, and Machine Learning processing
- Cloud-enabling cluster technologies and virtualization
- Programming and software development environments on clusters
- Cluster system-level protocols and APIs
- Cluster security
- Resource and job management
- Fault tolerance and high-availability
- Energy-efficient middleware

Area 4: Data, Storage, and Visualization

- Cluster architectures for Big Data storage and processing
- Middleware for Big Data management
- Cluster-based cloud architectures for Big Data
- Storage systems supporting the convergence of HPC and Big Data processing
- File systems and I/O libraries
- Support and integration of non-volatile memory
- Visualization clusters and tiled displays
- Big data visualization tools
- Programming models for big data processing
- Big data application studies on cluster architectures

Submission Format:
- No more than 10 pages (not counting references)
- Single-spaced, 2-column numbered pages in IEEE Xplore format
- Only web-based submissions of PDF documents are allowed.
- Papers will NOT be reviewed double-blind.
- Templates: http://www.ieee.org/conferences_events/conferences/publishing/templates.html
- Submissions: https://ssl.linklings.net/conferences/ieeecluster/

Important dates:
- Abstract deadline: ~~May 10, 2019~~ May 17, 2019
- Full Papers due: ~~May 17, 2019~~ May 24, 2019
- Paper Acceptance Notification: July 15, 2019
- Camera-ready deadline: August 12, 2019
- Conference: September 24-27, 2019
- All deadlines are Anywhere on Earth (AoE)
